Git · jQuery · TypeScript · MongoDB · Postman · AWS · PostgreSQL · VS Code

Wordpress · Project Management · Creativity · MS Office · Illustrator · Photoshop · InDesign · Premier

SAMPLE WEB DEVELOPMENT PROJECTS

MYFLIX | Angular | September 2021
A single-page, responsive movie application built using the **MEAN stack** (MongoDB, Express, Angular, and Node.js). This app allows registered users to browse movies by specific criteria and update personal information, including a list of favorite movies.
Live project: https://jborchers.github.io/myFlix-Angular-client/

MEET APP | React Native | June 2021
A RESTful API created using Node.js and Express, which interacts with MongoDB (a non-relational database). The API can be accessed using HTTP methods like GET, POST, PUSH, and DELETE. I used CRUD (create, read, update, delete) methods to interact with the data stored in the database.
